

Congratulations! You have completed this lesson. At this point in the course, you know:

- SQL is a query language used for relational databases.
- A database is a repository of data.
- A relational database contains tables of related data stored in a tabular format, which is often related to other tables of data.
- A DBMS is software used to manage databases.
- A RDMS is a set of software tools that control the data in a relational database.
- You use the five main SQL commands to create a table, and insert, select, update, and delete data.
